

Exchange Progress

This is the first part of a physical interactive installation we build for the University of Applied Sciences Kaiserslautern (<http://www.fh-kl.de/>) in Germany. The concept for this project is based on communication between individuals and thus the influence we have on each others development. It tracks interaction between students and teachers. When the software starts, every individual circle has a basic shape, through communicating with each other the circles exchange parts of their shape, thus parts of their individuality. The output is vectors, so you it can also be used for huge print posters, all individualized. We also did some huge art prints for our clients last Christmas that were featured in Computer Arts Projects 98 (<http://www.taobot.com/recognition>) .
